

System Pages and Menu Reference

Standard reference for the visible pages, admin menus, submenus, routes, business purpose, and access permissions currently implemented in syncPoS.

Prepared for user acceptance testing and system administration.

1. Access Model

The admin interface uses role-based permissions. A user sees only the modules and submenus allowed by assigned role permissions. Important protected pages and server actions also check permissions on the server.

Permission	Purpose
all:all:all	Full access to every module.
catalog:products:view	View product catalog pages.
catalog:products:manage	Create, update, delete, and restore product catalog records.
partners:partners:view	View customers, suppliers, and payment terms.
partners:partners:manage	Create, update, delete, and restore partner records.
inventory:stock:view	View inventory, stock cards, serial history, transfers, and operations.
inventory:stock:receive	Post stock operations, purchases, receipts, adjustments, opening stock, and returns.
inventory:locations:manage	Manage warehouse and shop locations.
sales:orders:create	Access sales order, delivery, invoice, payment, and return flows.
reports:profit:view	View dashboard and detailed reports.
company:settings:manage	Manage payment configuration, expenses, and company-level operational settings.
iam:users:view	View users.
iam:users:manage	Create, edit, disable, and unlock users.
iam:roles:view	View roles and permissions.
iam:roles:manage	Create, edit, and delete roles.

2. Public and Auth Pages

Page	Route	Purpose
Landing page	/	Public professional landing page for syncPoS.
Login	/login	User sign-in page with failed login tracking and temporary logout.
Unauthorized	/unauthorized	Access denied page shown when a signed-in user lacks permission.

3. Admin Shell

Area	Purpose
Left sidebar	Main module navigation. Items are hidden when the user lacks permission.
Top submenu	Shows submenus for the active module, similar to Odoo. Submenus are permission-filtered.
Sign out area	Shows sync status, current username, and the sign out button.

4. Dashboard

Required permission: `reports:profit:view`

Menu	Route	Purpose
Overview	<code>/admin</code>	Main operations dashboard with sales, payments, expenses, receivables, payables, stock value, low stock, payment accounts, and recent activity.
Daily Activity	<code>/admin?view=daily</code>	Reserved dashboard view for daily operational activity.
Sync Status	<code>/admin?view=sync</code>	Reserved dashboard view for sync/offline status.

5. Products

View permission: `catalog:products:view` . **Manage permission:** `catalog:products:manage` .

Page/Menu	Route	Purpose
Products	<code>/admin/products</code>	Product list with filters and product detail access.
New Product	<code>/admin/products/new</code>	Create product with Odoo-like tabs for catalog data, pricing, tracking, attributes, compatibility, and taxes.
Product Detail	<code>/admin/products/[id]</code>	View product detail, stock/tracking context, and related information.
Edit Product	<code>/admin/products/[id]/edit</code>	Edit the same product form used for create.
Categories	<code>/admin/products/categories</code>	Manage product categories in popup forms.
Brands	<code>/admin/products/brands</code>	Manage product brands in popup forms.
Units	<code>/admin/products/units</code>	Manage units of measure in popup forms.
Taxes	<code>/admin/products/taxes</code>	Configure reusable taxes for purchase and sales lines.
Price Lists	<code>/admin/products/price-lists</code>	View and manage price lists and product prices.
Lots / Serials	<code>/admin/products/tracking</code>	View serial/lot tracking information for tracked products.

6. Partners

View permission: `partners:partners:view` . **Manage permission:** `partners:partners:manage` .

Page/Menu	Route	Purpose
All Partners	/admin/partners	Partner list for customers, suppliers, or both.
Customers	/admin/partners?role=customer	Customer-filtered partner list.
Suppliers	/admin/partners?role=supplier	Supplier-filtered partner list.
New Partner	/admin/partners/new	Create customer/supplier partner.
Edit Partner	/admin/partners/[id]/edit	Edit partner profile, contact, address, and customer/supplier flags.
Payment Terms	/admin/partners/payment-terms	Manage text-based payment term records.

7. Purchasing

Required permission: `inventory:stock:receive`

Page/Menu	Route	Purpose
RFQs / Orders	/admin/purchasing	Purchase order list with status and related document counts.
New RFQ	/admin/purchasing/new	Create purchase order with notebook order lines and many taxes per line.
Purchase Detail	/admin/purchasing/[id]	Edit draft orders, confirm orders, receive products, and use smart buttons for related documents.
Receipts	/admin/purchasing?view=receipts	List purchase receipts separately from purchase orders.
Receipt Detail	/admin/purchasing/receipts/[id]	View/post receipt details and assign serial or lot during receipt.
Landed Costs	/admin/purchasing?view=landed-costs	List landed cost documents.
New Landed Cost	/admin/purchasing/landed-costs/new	Create landed cost linked to receipt or purchase order.
Landed Cost Detail	/admin/purchasing/landed-costs/[id]	View allocation preview and posted landed cost result.
Vendor Bills	/admin/purchasing?view=supplier-bills	List vendor bills with products, taxes, totals, residual amount, and payment status.
Vendor Bill Detail	/admin/purchasing/vendor-bills/[source]/[id]	View vendor bill details and register supplier payment.
Payments	/admin/purchasing?view=payments	List outbound supplier payments.
Supplier Payment Detail	/admin/purchasing/payments/[id]	View, post, or cancel supplier payment document.
Returns	/admin/purchasing?view=returns	List supplier return documents.
New Supplier Return	/admin/purchasing/returns/new	Start supplier return from a posted purchase receipt.
Supplier Return Detail	/admin/purchasing/returns/[id]	View/post supplier return document.

8. Sales

Required permission: `sales:orders:create`

Page/Menu	Route	Purpose
Quotations / Orders	<code>/admin/sales</code>	Sales quotation/order list with customer, status, delivery/invoice/payment progress, products, and totals.
New Quotation	<code>/admin/sales/new</code>	Create sales quotation with shared Odoo-like order form and notebook lines.
Sales Order Detail	<code>/admin/sales/[id]</code>	Edit draft quotation, confirm quotation, create delivery, create invoice, and use smart buttons.
Deliveries	<code>/admin/sales?view=deliveries</code>	List customer delivery documents.
Delivery Detail	<code>/admin/sales/deliveries/[id]</code>	View/post/cancel delivery. Delivery reduces stock and updates serial status.
Invoices	<code>/admin/sales?view=invoices</code>	List customer invoices with residual and payment status.
Customer Invoice Detail	<code>/admin/sales/invoices/[id]</code>	View/post invoice and register inbound customer payment.
Payments	<code>/admin/sales?view=payments</code>	List inbound customer payments.
Customer Payment Detail	<code>/admin/sales/payments/[id]</code>	View/post/cancel customer payment document.
Returns	<code>/admin/sales?view=returns</code>	List customer returns.
New Customer Return	<code>/admin/sales/returns/new</code>	Start customer return from original sales order.
Customer Return Detail	<code>/admin/sales/returns/[id]</code>	View/post customer return and refund placeholder data.

9. Inventory

View permission: `inventory:stock:view` . **Posting permission:** `inventory:stock:receive` . **Location permission:** `inventory:locations:manage` .

Page/Menu	Route	Purpose
Stock	<code>/admin/inventory</code>	Stock by location summary with product, location, quantity, serial/lot, and cost context.
Operations	<code>/admin/inventory/operations</code>	Inventory operation list covering receipts, deliveries, adjustments, scrap, and returns.
New Operation	<code>/admin/inventory/operations/new</code>	Create document-based inventory operation.
Operation Detail	<code>/admin/inventory/operations/[id]</code>	View/post inventory operation and movement lines.
Transfers	<code>/admin/inventory/transfers</code>	Transfer list for moving stock between locations.
New Transfer	<code>/admin/inventory/transfers/new</code>	Create transfer with source, transit, and destination locations.
Transfer Detail	<code>/admin/inventory/transfers/[id]</code>	Approve, dispatch, receive, and handle transfer discrepancies.
Stock Card	<code>/admin/inventory/stock-card</code>	Product ledger report showing stock movement history.
Serial History	<code>/admin/inventory/serial-history</code>	Serial/lot history and current status/location.
Locations	<code>/admin/inventory/locations</code>	Manage warehouses, shops, transit, supplier, customer, and scrap locations.

Page/Menu	Route	Purpose
Opening Stock	/admin/inventory/opening-stock	Opening stock import with validation preview and audit trail.

10. Reports

Required permission: `reports:profit:view`

Page/Menu	Route	Purpose
Report Hub	/admin/reports	Central page for detailed report links.
Sales	/admin/reports/sales	Sales report by date, customer, document, and totals.
Expenses	/admin/reports/expenses	Expense report by category, date, payment account, and status.
Payment Accounts	/admin/reports/payment-accounts	Bank/cash/mobile/card transaction summary and account movement detail.
Stock	/admin/reports/stock	Stock valuation and stock availability report.
Receivables	/admin/reports/receivables	Customer invoice residual balances and payment status.
Payables	/admin/reports/payables	Vendor bill residual balances and payment status.

11. Settings

Settings menus are permission-filtered. Users and Roles separate viewing from management.

Page/Menu	Route	Purpose	Permission
Users	/admin/settings?view=users	View users, employee links, roles, login status, failed attempts, lock state, and last login.	iam:users:view
New/Edit User	Popup on Users page	Create/update username, email, employee link, password, status, email verified flag, and roles.	iam:users:manage
Disable/Unlock User	Actions on Users page	Disable user login or unlock/reset failed login status.	iam:users:manage
Roles	/admin/settings?view=roles	View role code, name, flags, user count, permission count, and active status.	iam:roles:view
New/Edit Role	Popup on Roles page	Create/update role metadata and assign permissions using many-to-many tags.	iam:roles:manage
Permissions	/admin/settings?view=permissions	View permission catalog with application, feature, action, status, and description.	iam:roles:view
Payments	/admin/settings/payments	Configure payment methods and accounts for cash, bank transfer, mobile money, and card usage.	company:settings:manage

12. Operations

Required permission: `company:settings:manage`

Page/Menu	Route	Purpose
Tasks	/admin/operations	Operations workspace with links to expense registration and future approval queues.

Page/Menu	Route	Purpose
Approvals	/admin/operations?view=approvals	Reserved approval queue view.
Expenses	/admin/operations/expenses	List business expenses that do not increase inventory value.
New Expense	/admin/operations/expenses/new	Register paid or unpaid expense with category, payment status, optional employee/vendor/location, and notes.
Expense Detail	/admin/operations/expenses/[id]	View expense, register payment later, and track status.
Expense Categories	/admin/operations/expenses/categories	Manage reusable expense categories.

13. Important Notes

- The left sidebar and top submenu both use the active user's permissions.
- Hidden menu items are not the only protection. Important pages and server actions also check permissions.
- Some planned views are menu routes but not full independent pages yet: dashboard daily activity, dashboard sync status, and operations approvals.
- Settings Users and Roles support view-only access separately from management access.

14. Suggested Future Permission Improvements

Future Permission	Purpose
sales:orders:view	View sales without creating or editing.
sales:deliveries:manage	Post/cancel customer deliveries separately from sales order creation.
sales:invoices:manage	Create/post customer invoices.
sales:payments:manage	Register/post customer payments.
purchasing:orders:view	View purchasing without receiving or posting.
purchasing:orders:manage	Create/confirm purchase orders.
expenses:view	View expenses without managing company settings.
expenses:manage	Create, edit, cancel, and pay expenses.
inventory:valuation:view	View stock cost/value fields separately from physical quantities.

15. Page Use Cases

This section explains when each page should be used in daily business operations.

15.1 Dashboard Use Cases

Page/Menu	Main Use Case	Example
Overview	Monitor business health from one screen.	A manager checks today's sales, payments received, unpaid customer invoices, unpaid vendor bills, and low stock before opening the shop.
Daily Activity	Review operational activity for a specific day.	A supervisor checks what was sold, paid, received, or adjusted during the current business day.

Page/Menu	Main Use Case	Example
Sync Status	Monitor offline device sync readiness and pending activity.	A shop manager checks if a display-shop POS device has pending offline sales waiting to sync.

15.2 Product Use Cases

Page/Menu	Main Use Case	Example
Products	Maintain the master product list used by purchasing, inventory, and sales.	Add a tractor, spare part, accessory, or consumable so it can be purchased, stocked, sold, and reported.
New/Edit Product	Create or update product identity, tracking, pricing, taxes, and attributes.	Create a serial-tracked machine product with SKU, barcode, brand, unit, sales price, purchase tax, and compatibility notes.
Categories	Group products for filtering, reporting, and cleaner catalog management.	Create categories such as Tractors, Engines, Tires, Attachments, Filters, or Spare Parts.
Brands	Track product manufacturer or brand identity.	Add brands such as Massey Ferguson, John Deere, Kubota, or local suppliers.
Units	Define how product quantity is measured.	Use Piece for machines, Liter for oil, Meter for hose, or Set for grouped spare parts.
Taxes	Configure reusable tax rates used on purchase and sales document lines.	Create VAT 15%, withholding tax, or tax-exempt configuration and select it on order lines.
Price Lists	Control selling prices for different customer groups, shops, or promotions.	Use a Retail Price List for walk-in customers and a Wholesale Price List for dealers, with different prices for the same product.
Lots / Serials	Trace unique machines or batches through purchase, stock, sale, return, and warranty.	Find the current owner and movement history of a machine using its serial number.

15.3 Partner Use Cases

Page/Menu	Main Use Case	Example
All Partners	Maintain all external parties in one place.	Register a company that buys spare parts and also supplies used machinery.
Customers	Manage people or organizations that buy products.	Select customer-only partners during sales order and invoice creation.
Suppliers	Manage vendors that supply stock or services.	Select supplier-only partners during RFQ, purchase order, vendor bill, and supplier payment workflows.
Payment Terms	Define readable payment agreements.	Create terms like Cash on Delivery, 30 Days Credit, or 50% Advance and 50% on Delivery.

15.4 Purchasing Use Cases

Page/Menu	Main Use Case	Example
RFQs / Orders	Control products being requested or purchased from suppliers.	Create an RFQ for spare parts, confirm it as a purchase order, then track receipt and billing.
Receipts	Record stock physically received from a supplier.	Receive 10 engines from a supplier and assign serial numbers before stock becomes available.
Landed Costs	Add freight, customs, handling, or other capitalized costs to inventory value.	Allocate import freight across received machines by value so each machine has a more accurate total cost.

Page/Menu	Main Use Case	Example
Vendor Bills	Track supplier invoices and payable balances.	Record the supplier bill for a purchase order and see remaining balance after partial payment.
Payments	Track money paid to suppliers.	Register a bank transfer against a vendor bill and reduce the payable balance.
Returns	Send purchased stock back to a supplier with traceability.	Return a damaged serial-tracked machine to the supplier and keep the receipt/return history auditable.

15.5 Sales Use Cases

Page/Menu	Main Use Case	Example
Quotations / Orders	Prepare offers and convert approved offers into sales orders.	Create a quotation for a customer, confirm it when accepted, then deliver and invoice.
Deliveries	Move sold stock out of inventory through a controlled document.	Select the exact serial number of a sold machine and post delivery to reduce stock.
Invoices	Track customer receivables.	Create a customer invoice from a sales order and follow unpaid, partial, or paid status.
Payments	Track money received from customers and the account used.	Register cash, bank transfer, mobile money, or card payment against a customer invoice.
Returns	Receive sold goods back from customers and preserve the original sale link.	Accept a returned spare part or machine and prepare refund/credit handling.

15.6 Inventory Use Cases

Page/Menu	Main Use Case	Example
Stock	Check current stock by product and location.	Confirm if a product is available in the main warehouse or a display shop before selling.
Operations	Review document-based stock movements.	Audit why stock increased or decreased by checking receipts, deliveries, adjustments, scrap, and returns.
Transfers	Move stock between warehouses and shops.	Transfer a machine from the main warehouse to a display shop with dispatch and receipt control.
Adjustments	Correct stock differences discovered during counting.	Adjust quantity after physical stock count finds one missing spare part.
Scrap	Remove unusable stock from available inventory.	Scrap a damaged component so it cannot be sold.
Stock Card	Trace a product's quantity changes over time.	Investigate all movements for a specific SKU from opening stock through purchases, sales, and returns.
Serial History	Trace one serial or lot across its lifecycle.	Check where a machine came from, where it was delivered, whether it was returned, and warranty ownership.
Locations	Maintain warehouses, display shops, transit locations, and special locations.	Create a new shop location and control whether offline sales or negative stock are allowed there.
Opening Stock	Load existing stock before normal purchase/sale workflows begin.	Import current warehouse stock from Excel during system go-live.

15.7 Report Use Cases

Page/Menu	Main Use Case	Example
Report Hub	Navigate to all detailed reports.	A manager opens the hub to choose sales, stock, payment, receivable, or payable reports.
Sales	Analyze sales performance.	Check total sales for this month by customer or document.
Expenses	Analyze non-inventory operating costs.	Review fuel, rent, salary advance, repair, or office expenses by category and date.
Payment Accounts	See which cash/bank/mobile/card account handled each transaction.	Reconcile bank transfer payments against the bank statement.
Stock	Review stock quantity and valuation.	Find high-value stock, low stock, and product availability by location.
Receivables	Track customer debt.	Find customers with unpaid or partially paid invoices.
Payables	Track supplier debt.	Find vendor bills that still need payment.

15.8 Settings Use Cases

Page/Menu	Main Use Case	Example
Users	Create and control login accounts.	Create a salesperson user, assign the Salesperson role, or disable a user who left the company.
Roles	Group permissions into reusable access profiles.	Create a Branch Manager role that can view inventory, sell products, and view reports.
Permissions	Review the available permission catalog.	Check which permission is needed before granting a user access to reports or settings.
Payments	Configure how money is received and paid.	Create Cash Register, CBE Bank, Telebirr, or Card Terminal accounts and decide inbound/outbound usage.

15.9 Operations Use Cases

Page/Menu	Main Use Case	Example
Tasks	Provide an operational workspace for non-sales/non-purchase work.	A supervisor opens operations to review expense or approval-related tasks.
Approvals	Future workspace for approval queues.	Approve an over-receipt, discount exception, or stock adjustment once approval rules are added.
Expenses	Record business expenses that should not increase inventory cost.	Register rent, transport, utilities, maintenance, or office supplies as expenses.
Expense Categories	Classify expenses for reporting.	Create categories such as Rent, Fuel, Transport, Maintenance, Salary, or Utilities.
